Persona AI Workforce

An AI Workforce Operating System — an entire organization operated by specialist AI teams. You instruct in natural language; the right team picks up the work, coordinates across departments, verifies against sources and delivers a signed, audited result.

Executive dashboard — task flow and delivery at a glance

- **7+ specialist AI teams** — Executive Support, General Affairs, HR, Legal, Compliance, Finance & Accounting, Marketing & PR, with capability added as the organization grows.
- **Verification-first pipeline** — receive, investigate, draft, review & rebut, cross-verify, document, record.
- **Signed deliverables** — certificates and contracts with tamper-evident serial numbers.

Persona AI Legal

AI legal intelligence built for verification. Research, drafting and review in one intelligent workspace — 7 Legal AI Agents, source-grounded statutory and case research, and every answer anchored to its cited source.

업무는 수습변호사가, 검증은 파트너가.

사원증을 누르면 그 직원과 대화할 수 있습니다. 소송 문서가 필요하면 수습변호사에게 부탁하세요 — 파트너 전원이 협업합니다.

AI legal workspace — research, drafting and source verification

- **Source-grounded answers** — statutes, cases and documents attached to every response.
- **Independent review** — separate Legal AI Agents challenge each draft before delivery.
- **Full record** — sessions, sources and versions preserved for the file.

Platform & Security

Security designed into the pipeline, not wrapped around it. Claims, data and documents pass through a supervised pipeline with identity, authorization and audit controls at every step.

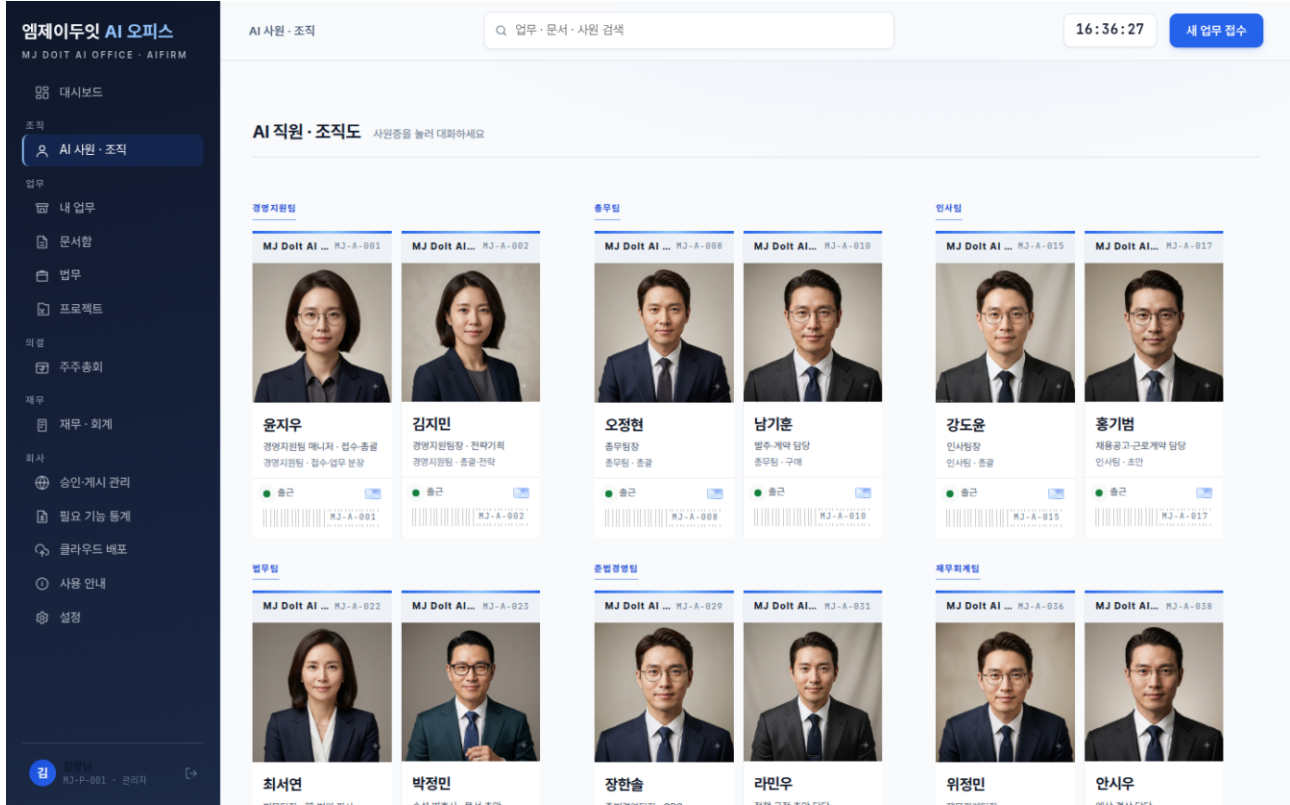

Identity-driven, role-scoped access

- **Identity & Access** — role-based control scoped down to document, team and action.
- **PII Masking** — sensitive information is masked before external AI processing.
- **Audit Ledger** — every key action is signed into a tamper-evident, hash-verified record.

Control coverage includes: encryption, logging, retention, deletion, backup, model provider, data residency and incident response — each confirmed in our security appendix before onboarding.

Deployment & Adoption

Deploy where your data lives. Cloud, on-premise or hybrid — and the model can be hosted externally or run as a local model inside your network.

Organized team workspace — roles, cases and deliverables

- **Cloud, On-Premise, Hybrid** — deployment mode is your decision.
- **Local Model** — fully internal processing for strict data-residency requirements.
- **Guided Pilot** — start on your own data in a supervised demonstration before rollout.

Adoption path: guided demonstration ? security review with your team ? controlled pilot on your data ? rollout with audit verification.

Build an AI Workforce for Your Organization
